Protect your home against MOSQUITOES

1. Pool cover that collects water; neglected swimming pool or child's wading pool
2. Bird bath (change water weekly) and garden pond (stock with fish)
3. Any toy, garden equipment, or container that can hold water
4. Flat roof with standing water
5. Clogged rain gutter (home and street)

Mosquitoes develop in water that stands for more than five days. To reduce the mosquito population around your home and property, eliminate all standing water and debris. Here are some spots where water can collect or where poor maintenance can cause problems.

6. Trash and old tires; Drill drain holes in bottom of tire swings
7. Tree rot hole, hollow stump, or rain puddle
8. Missing, damaged, or improperly installed screens
9. Uncovered boat or boat cover that collects water
10. Leaky faucet or pet bowl (change water daily)
